

# The Evergreen Strategy

---

The Evergreen Strategy is designed specifically for Long-Only Traders and offers a disciplined strategy to help maximize your trading.

1. Perform a Multiple Time Frame Analysis and find an investment that is bullish on the Monthly, Weekly, and just turned bullish on the Daily charts.
2. Buy and go long if you think it is an investment you find suitable.
3. When your long position issues a Daily Red signals, immediately perform a new Multiple Time Frame Analysis and determine whether you want to sell on the daily signal, or wait until the weekly or monthly light changes.
4. If you choose to follow the Red Light, exit the position and wait until your sell is completed.
5. Go to Step 1 and repeat the cycle.

## Strategy Advantages:

1. You are always bullish, and historically bull markets go up five times for every one time they go down.
2. You analyze multiple time frame charts to assure you are comfortable with that investments trend momentum on multiple time frames.
3. You can move between investment types and styles or remain in one type.
  - 3.1. Move within a type: Country ETF to Country ETF to Country ETF, etc.
  - 3.2. Move among various investment types: Index ETF, Sector ETF, Commodity ETF, Forex Pair, or Cryptocurrency; there are no limitations.

There is not a single trading strategy in existence that guarantees every trade will be a winner. However, within a very short period, you will become an efficient and successful evergreen trader. You can even own multiple Evergreen trades simultaneously. The Evergreen Strategy certainly helps find and keep momentum in your favor because there are always Wealth Maximizer Investment Charts that have Multiple Time Frame supporting bullish trend momentum.

# Evergreen Example

Moving from one country to another makes more sense than buying and holding a country while it declines. Move from a tired ending bull run to a fresh new bull run.

**Trade 1:** On July 9 you found and were comfortable with a Green Light in the Daily Japan chart and entered a bullish [Japan ETF](#) position.

On July 23 the Red Light would have allowed you to exit your [Japan ETF](#) with a gain of roughly 4.1% in just two weeks.

You then located a new daily green light using multiple time frame analysis in your Wealth Maximizer Member area on August 5th.

**Trade 2:** You found a green light in the New Zealand Daily Chart and entered a bullish position in a [New Zealand ETF](#) picking up another 3.7% in 3 weeks.

So, in a month when the stock markets were volatile, the European political system was in flux, the US was getting closer to mid-term elections, and Europe was in market turmoil, an opportunity for profit existed.

What Country will have the Multiple Time Frame Analysis to become Trade 3?
