

# The Wealth Preserver Members Guide

## **BUILD AND PRESERVE WEALTH IN YOUR 401K, IRA, RSP, SUPERANNUATION OR ANY REGISTERED RETIREMENT PLAN OR INVESTMENT ACCOUNT IN THE WORLD.**

This invest, protect, and grow strategy is no different than your current buy and hold strategy EXCEPT that it can help your retirement grow faster by avoiding losses and the time it takes to recover from those losses. Avoiding losses means you have more money while the market is rising to get you to retirement faster.

Follow the two simple rules below in all your retirement accounts:

### **Step One:**

Please login InterAnalyst.us members area and view the Private Membership Blog and click on our facebook and/or twitter links to "Follow" InterAnalyst. Once complete, you should automatically receive notifications. Wealth Preserver charts are updated by midnight the last trading day of the month. You should login to check the charts then and read any important notifications. When a Protect & Preserve or Invest & Grow signal.

### **Step Two**

When you receive a **Red Light Protect & Preserve** alert do the following:

1. Within the next few days contact your retirement plan administrator or Discount Broker and ask them to shift your current money from equity mutual funds or ETFs to a money market or cash account.
2. Never change or stop contributing to your retirement plan into the funds.
3. Be patient as the decline could last months, even years. A green **Invest & Grow** alert is guaranteed to come again when the economy and stock market are back on the rise.

### **Step Three**

When you receive a **Green Light Invest & Grow** alert do the following:

1. Within the next few days contact your retirement plan administrator or Discount Broker and ask them to move your money from the money market or cash account into the equity funds or stocks you held prior to the red arrow.
2. Never stop contributing to your retirement plan. This new **Invest & Grow** period could last many years benefiting you significantly because you now have more money than "non-members" who were not protected from the stock market decline to buy equity funds or stocks at lower prices.
3. Rest assured, we've got your back. When the economy and stock market show signs of underlying instability, a new **Red Light Protect & Preserve** alert will appear.
